DETAILED ACTION

Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 3/15/2010 has been entered.

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 11-12 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with **the written description requirement**. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. Applicant's independent claim 11 seeks broad protection for embodiments not requiring --a retaining ring, wherein the hub is axially secured relative to the shaft by the retaining ring in a position disposed around the shaft while holding the shaft tooth section and the hub tooth section in engagement with each other--. As described to be necessary on p.10, ll.14-19. Applicant's written description fails to describe any such other embodiment not requiring such elements. See MPEP § 2163 and MPEP § 2172.01. The examiner notes that this

rejection can be overcome by replacing lines 5-6 of claim 11 with the above noted phraseology. See prosecution history of copending application 10567134 for explanation of the necessity of claiming the axial securement (i.e., description of tooth interaction must be claimed in an axially fixed state to be meaningful over prior art since tooth/peak/valley relations vary during installation/removal). See applicant's remarks filed 11/22/2010 in copending application 10567134 which persuasively explains on pp.5-6 how a retaining ring is conventional in the art and thus need not be shown in the drawings.

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 11-12 are rejected under 35 U.S.C. 112, second paragraph, as being incomplete for omitting essential elements, such omission amounting to a gap between the elements. See MPEP § 2172.01. The omitted elements are: --a retaining ring, wherein the hub is axially secured relative to the shaft by the retaining ring in a position disposed around the shaft while holding the shaft tooth section and the hub tooth section in engagement with each other--. The examiner notes that this rejection can be overcome by replacing lines 5-6 of claim 11 with the above noted phraseology.

Response to Arguments

Applicant's arguments with respect to the claims have been considered but are moot in view of the new grounds of rejection.
